Proven to work well as part of a team and can work independently and efficiently to achieve tasks at hand. I am a person who works harder when it comes to getting the best results and never quits to achieve them. Strong planner and problem solver who readily adapts to change and exceed expectations. Able to juggle multiple priorities and meet tight deadlines without compromising quality in work.

Technical Skills

- Responsive web design using HTML5, CSS3 and frameworks such as Bootstrap, Tailwind and Bulma.

- Dynamic web page development and API implementation using JavaScript, React.js and jQuery.

- Back end web development using Node.js and Express.js

- Database design and management using mySQL, sequelize, MongoDB and Mongoose.

- The use of server side templating engine Handlebars.

- Object-Orientated Programming with JavaScript.

- Version control with the usage of Git and Github/GitLab.

Projects:

Fitness Friends: A full-stack application to share and keep track of workouts, meal plans, diets and fitness progress. The packages required to run are: bcrypt, connect-session-sequelize, dotenv, express , express-handlebars, express-session, mysql2, sequelize and nodemon. A database will need to be created first then seeded with data. On Heroku, go to the webpage. As a guest, you can read some workout information and click on links; as a registered user, you may add your own posts. You can also alter the names and content of your own posts, as well as delete them. You can also change your password, email, and username.

https://github.com/samira0101/Fitness-Friends

Weather Dashboard: For this project, I had to build a weather dashboard by retrieving data from an API showing the weather forecast for multiple cities. I utilised HTML, CSS, Bootstrap, JavaScript and Moment.js in order for this application to run.
